

ABSTRACT

PACKAGING INTENDED TO BE USED FOR TRANSPORTING STERILE OBJECTS OR OBJECTS THAT ARE TO BE STERILIZED

This packaging (1) comprises a box (3), a cover sheet (4) made of a material that is not permeable to a decontamination gas, comprising a window closed by a piece of selectively impervious material. The packaging further comprises a flexible piece (8) of a material that is not permeable to a decontamination gas, this piece being fixed to the cover sheet (4) by at least one of its edges (15) and comprising a free part (16), the free part (16) of said piece being able to move between a diffusion position and a non-diffusion position.
